

#PassOnPlastic

Serlby Park,

We need you!

Everyday around 15,000 pieces of plastic are dumped in the oceans around you. This could include a straw you used in McDonalds or a single use water bottle you bought in a shop or canteen. Micro-plastics are the most dangerous form of plastic which enters the oceans, this is because it is eaten by microscopic plankton which effects the whole food chain. As humans we are also affected by this epidemic, we eat the fish which could have digested multiple pieces of plastic. If we carry on we'll end up causing serious illnesses with this material.

Please Do Your Bit!

**REUSE/ REDUCE/ RECYCLE**

By the time, you have read this one truckload of single use plastic rubbish, will have been dumped into the sea!

Thankyou

Students of Serlby Park Academy
